Course: SECJH

Comments by Grader:

The ICT jobs seminar by Clarity Techworks gave important insights into the dynamics of the industry. The talk emphasised the integration of theoretical knowledge and practical skills, highlighting important roles such as Web/API Developer and QA Testing Analyst. Effective communication, critical thinking, continuous learning and creative thinking skills were emphasised.

The difference between the work and school environments highlighted the need for stress-free practice and learning and the industry's current problems. The practical duties in ICT roles became clearer when job scopes were understood, such as API production and backend troubleshooting.

The seminar conveyed the industry's preference for tech enthusiasts who are self-learners and motivated problem solvers. It acted as a motivating road map for me as a student, highlighting the need to keep learning new things to have a successful career in information and communications technology. In summary, it offered significant perspectives on the industry's demands, encouraging a comprehensive strategy to pursue a significant position in information and communication technology.
